

## **MATERIALS TESTING GROUP LEADER**

**Location: Schenectady, NY**

Experienced materials testing engineer with broad materials background is wanted to lead laboratory testing operations for a growing full-service materials testing and analysis business. Qualified candidates will be able to perform duties and tasks associated with failure analysis investigations, mechanical and electrical testing. Responsibilities also include providing coordination and technical direction to a team of test engineers and technicians. Metallurgical knowledge and supervisory experience are preferred. Minimum qualifications include an engineering degree in materials, mechanical or metallurgical engineering, and preferably at least five years' experience. Successful candidate will demonstrate technical excellence, effective interpersonal skills, mechanical dexterity, and strong ability for creative problem-solving. Strong customer focus and excellent communication, writing and computer skills in MS Office products are required. Excellent benefits package. Tuition reimbursement options are available. This position is based in Schenectady, New York.
